INTRODUCTION

Engineering student with experience in building Full Stack projects, data pipelines, and machine learning applications. Skilled in building RESTful APIs, authentication systems, processing large-scale datasets, and automation workflows using Python, Node.js, and development tools.

TECHNICAL SKILLS

Languages: Java, Python, C, JavaScript
Frameworks: React.js, Node.js, Express.js, Flask (Basic)
Databases: SQL, MongoDB
Backend: REST APIs, JWT Authentication, MVC Architecture
Developer Tools: Git, GitHub, Postman, Jupyter Notebook, Google Colab
Core Subjects: Data Structures, Object Oriented Programming, Computer Networks
Other: Problem-solving and communication skills with experience collaborating in agile teams.

PROJECTS

UIDAI Biometric Surge Risk Analysis | *Python, Pandas, NumPy, Matplotlib*

- Processed and integrated 4.5M+ Aadhaar records from Aadhaar datasets provided by Government of India and built preprocessing pipeline reducing data cleaning time by 30%.
- Developed state and district level aggregations across 700+ districts and built weighted risk scoring framework to detect operational stress zones.
- Analyzed biometric surge patterns and demonstrated correlation with volatility rather than raw volume.

Zero Trust BYOD Platform | *Python, Scikit-learn, Node.js, React.js*

- Built a Zero Trust-based BYOD security platform that gives employees an encrypted, isolated workspace while keeping their personal device privacy intact.
- Designed REST APIs using Node.js and Express and implemented AES-GCM encryption for secure virtual storage.
- Integrated anomaly detection model to identify suspicious device behaviour.

Fake Social Media Account Detection System | *Python, Scikit-learn, Random Forest, Streamlit*

- Built ML classification system to detect fraudulent social media accounts.
- Engineered preprocessing pipeline using Pandas feature extraction techniques.
- Trained Random Forest classifier using behavioural and text-based features.

Flight Insurance Smart Contract | *Solidity, Remix IDE, Filecoin*

- Developed Solidity smart contract implementing escrow-based payouts for automated claim settlement.
- Automated claim validation and payout release using blockchain transactions.
- Tested and deployed contract using Remix IDE and Filecoin network.

EDUCATION

Shri Ramdeobaba College of Engineering and Management
Bachelor in Electronics and Communication Engineering

CGPA - 9.71
Sep. 2023 – Jun 2027

CERTIFICATIONS

- Python for Data Science, AI and Development – IBM
- Introduction to Information Technology and AWS Cloud – Coursera

ACHIEVEMENTS

- Winner of HackOn – National Level Hackathon (GCOEN Nagpur)
- Top 20 Finalist – CyberHack'25 (IIM Nagpur)
- 6th Rank – Hackronyx International Hackathon (Palloti College Nagpur)
